Company no. **15471358**

LFDC is a specialist fire door consultancy offering expert fire door surveys and safety consultancy services throughout London. We are committed to excellence in every aspect of our business, with a strong focus on environmental protection, pollution prevention, and continuous improvement of our environmental performance.

Our energy and environmental policy establishes a framework for managing environmental impact across all operations in our London office. This policy addresses both the environmental aspects we directly control and those we can influence.

Our Commitments:

1. **Compliance and Best Practices**: We will meet all compliance obligations and relevant requirements by implementing best practices wherever possible. Environmental considerations will be integral to our decision-making processes and business operations.

2. **Performance Assessment**: We will regularly assess our progress in reducing waste, energy consumption, and greenhouse gas emissions. Continuous improvement will be pursued through innovative practices that enhance our environmental performance while ensuring compliance with energy-related legislation and standards.

3. **Energy Efficiency**: We will explore and implement strategies to reduce our energy consumption and carbon footprint, striving for greater efficiency in the use and management of resources.

4. **Sustainable Procurement**: Environmental considerations will guide our sourcing and selection of products and services. We will ensure our suppliers uphold verifiable environmental standards.

5. **Waste Reduction**: We are committed to reducing, reusing, and recycling materials whenever possible to minimise waste.

6. **Sustainable Travel**: We aim to minimise travel-related environmental impacts by promoting the use of public transportation (trains, buses, and the London Underground) and supporting alternative communication systems that reduce the need for travel.

Implementation and Review:

This policy will be actively referenced in our decision-making processes and during internal management and operational meetings. It will be reviewed regularly to ensure its relevance and effectiveness in promoting environmental sustainability.
